TO WHOMSOEVER IT MAY CONCERN

We have been using **E-Yantra MEDO** in our Design & Engineering department since last 3 years.

We are using MEDO for designing and cross checking common engineering parts like Bolted joints, Shafts, Gears, Springs, Chain, Coupling, Bearings etc and found the package to be extremely reliable & user friendly.

MEDO has a feature for converting the designed parts for some modules in to 2D & 3D formats ie. in DFX & IGES format which is being used by us for expediting manufacturing drawings. MEDO was customized for our department to generate design report for components in a specific format, which can be directly appended to the equipment level design report.

We are extremely satisfied with the capabilities of this package which has helped us in a) reducing cycle time of design b) cross checking of design c) preparation of design report d) drawing generation e) with data on materials g) as a medium for training engineering trainees.
